Email: firman.aziz@upi.edu

Abstract. Use good media mass media as well as electronic media increases over time, especially with the presence of new media that is able to collect, process, and exchange information quickly. Research literacy competency media beorientasi life skills aims to describe the media literacy competency-oriented life skills which belonged to the high school teacher in the city of Bandung. Research methods using a descriptive qualitative approach method. The expected results are: (1) the discovery of the level and type of media literacy and competency (2) discovery of quality, factor endowments, and restricting the media literacy competency-oriented life skills teachers HIGH SCHOOL in Bandung. The results of the analysis of the data shows that the competence-based media literacy-oriented life skills teacher HIGH SCHOOL city of Bandung were still on secondary media literacy.

Keywords: Competence, Media Literacy, life skills

I. INTRODUCTION

The presence of technology, information, and communication has changed the orientation of the life of mankind. The ability of technology, information, and communication in providing everything necessary for the continuity of human life and comfort make the technology, information, and communication of successful entry into all aspects of life. Language activities in relation to the activities of the write medium in order to understand any form or manifestation of technology, information, and communication as one of the activities that supports the survival of human beings, is now no longer an unbounded keaksaran activity deals with the media physically write medium (paper). Media write medium is now combined with the media Vantage-listen or audio-visual digital media as well as the shape of the stroke technology. The presence of technology, information, and communications have influenced various aspects of the dynamics of human life began way of thinking, a way of feeling, to the way human behave very pronounced will "touch" technology, information, and communication. Man that was struck was not what dikreasikan can be turned into a hostage (technology of determinism). This condition caused no other strong influence and the role of technology, information, and communication are available.

Influence of media on the battle of life must be followed by the preparedness community. Activities interact and communicate, who had limited activities keaksaran bermedia paper and unbounded. Now such a significant shift towards activities that require an understanding of multimedia, multimodal, and multimodel along leaps and bounds of civilization that are generated by the entry of technology into the realm of information and

communication. Cases of misuse of the media emerged as an indicator of society's unpreparedness in the face of technological development, information and communication. The literacy abilities of unbounded on the activities of the physical write medium must be really terkuasai very well. Alphabet literacy or literacy must be immediately shifted with the literacy level of the media towards may or media literacy. No longer write medium unbounded but understand and productive, participating actively in order to not so principals or even victims are harmed due to misuse of information and communication media.

The abuse cases prove that the community has not been able to absorb the information and convey information well through the media. This is related to the literacy ability has not been good among the public. Some perpetrators of cases of abuse of the media is the teacher and the student. This proves that as an educator, there are many teachers who do not yet have a good media literacy ability. This imposes on learners. Lack of literacy education from teacher to learner led pesereta learners don't have good media literacy ability, finally the learners to become pekaku in the misuse of media information.

Media literacy is becoming important to prepare the audience for the media to be more sensitive and more anticipatory when coming into contact and the influence of media on the other. Media literacy abilities already possessed by the appropriate teacher. It is aligned with the content of the Government Regulation (PP) number 74 in 2008 about the teacher who States that teachers should have the competence, the competence of personality pedagogy, social competence, and professional competence. Aspects of competence that should be owned by the teachers, one teacher's competence with regard to

the pedagogic competency is media literacy, i.e. the utilization technology of learning by teachers or social competence, that teachers need to use information and communication technology are functional. The contents of the PP Number 74 in 2008 about the Teacher became one of the runways, the teacher should have a good media literacy the competence to develop the profession of seoptimal possible.

HIGH SCHOOL teachers are educators in the secondary high school. High school teacher is an educator who plays a major role in the formation of the character of learners. With good media literacy ability, teachers as educators, will absorb, deliver, and make good information. This research is early research of advanced research, namely literacy education for HIGH SCHOOL teachers. On this initial research, researchers want to chart the first literacy abilities of high school teacher in the city of Bandung, based on the level, type, quality, memegaruhi factors, as well as the availability of facilities and infrastructure supporting media literacy competency-oriented life skills teacher HIGH SCHOOL in Bandung.

The Study Of Theory

Understanding Of Media Literacy

The definition of media literacy, according to Buckingham and Livingstone using the trikotomi approach covers three areas, namely, media literacy means: (a) have access or facilities and infrastructure to the media, (b) understand the scope of the media, and (c) create/express yourself by using media (Darmasuti, 2013; Amalia, 2013). In General, media literacy is the ability of a person controlling influence the content or message of media on their lives. Irianto (2009, p. 68), specifies the media literacy activities include activities of accessing, analyzing, evaluating, and produce content or message media. This means that media literacy is a person's ability to use various media to access, analyze, evaluate, and generate information for various purposes. Someone will be influenced by the media around, good media content from television, film, radio, music, newspapers, magazines, even the internet can now be accessed via a cell phone. It happens in everyday life.

According to Rahardjo (2012) the things that are important from a media literacy, among them "... the media literacy encourages the emergence of critical thinking from the public against programs that served the media, media literacy also allows the creation of ability to communicate are competent in all forms of media, being proactive rather than reactive in understanding media programs ... ". Thus, media literacy is directly related to the problem of the skills, knowledge, and competence.

The Main Elements Of Media Literacy

The main elements of media literacy there are six, namely (1) awareness of the impact of the media; (2) an understanding of the process of mass communication; (2) strategies for analyzing and discussing media messages; (3) understanding of media content as a text that gives an insight into the culture and life; (4) the ability to enjoy, understand, and appreciate the content of the media; (5) an

understanding of the ethical and moral obligations of media practitioners;(6) skills development proper and effective production. (The first five elements by Art (1995). Two additional elements by Stanley j. Baran, 1999, pp. 49 – 54). The types in Media Literacy

There are two media literacy, i.e. the type of media literacy based on the destination media include (1) media literacy in a broader sense, compared to the media literacy of the word ' media literacy ' forms of literacy for the literacy activities of literacy. However, the equivalent of the word literacy does not reflect the major elements that literacy is not enough to just being able to read and understand text or discourse. Media literacy in the broad sense is still defined as a written media literacy in the content or print newspapers and the like. (2) media literacy in the sense of narrow, generally media literacy is the ability of an intelligent audience in utilizing media and can be applied to all individuals. Meanwhile, in the narrow sense, media literacy, still dwelling on certain media, i.e. the media audiovisual-based or informative has more to do with television. It is still we see in many media literacy in African-American activist site or foreign media literacy which showed that it was primarily intended for television media. Of course now the pop media literacy has relatively the same understanding that media literacy is applicable for all types of media, both old media or new media, both print and electronic (Amalia, 2013). (3) new media literacy, is the effect of advances in technology in particular. Digital media literacy is the conception of the enclosing skills and understanding for media based multi-dimensional, mutlimodel, as well as multimedia in between internet-based media, computer-based media, and media-based cell phones. Digital literacy is reinforced with the understanding that new media messages have consequences at the personal and dynamic public, the contents of the message content and new media are converging, and new media are able to liaise on participant communication from anywhere (social media).

The second type, i.e. the type of media literacy based on the level of proficiency that is trying to appear include the following matters: (1) the initial level of media literacy, media literacy is usually in the form of the introduction of the media, especially the impact of positive and negative potential produced by the media are presented; (2) intermediate media literacy aims to grow in proficiency understand, understand, and apply the messages that are presented from the media; (3) advanced media literacy, media literacy in the outer bore of know-how to understand media ranging from the planning up to the production of messages, the structure of knowledge against the media are relatively complete, critical understanding and on the level of action, e.g., advise on certain media and criticized certain media (Amalia, 2013). In relation to the life skills literacy media type based on the level of life skills who want to appear is the personal skills, social skills, academic skills, and competence of the Polytechnic in the form of a reflection of teacher professionalism.

Media Literacy Activity Skills

Understand and bring up individual skills in using the media is the main goal of the literacy activities in the media. This goal is more important when compared with the aim to introduce the media or even to grow a critical understanding of the media. There are seven skill or ability that will emerge from the media literacy activities: analyze, assess, classify, induces, mendeduksi, synthesize, mengabstraksi (Potter, 2008). Such skills should also be strengthened with media literacy aspects according to Art (1995, p. 13), i.e., process, context, framework, production value. Based on the activities of the media literacy competencies has been mentioned by Potter (2008) and Art (1995), media literacy competencies that appear on research literacy competencies, namely media that cover the activities of accessing, analyzing, evaluating, and producing content/media messages (Irinato, 2009, p. 68). The fourth activity is the outline that represents the media literacy competence in theory Potter (2008) and Art (1995).

Life Skills

Skills to manage and solve the problem of life is an absolute must-have skills of humans in ensuring continuity and comfort his life. Skilled or qualified to be an indicator of the success of the education given to someone. Skills or abilities that are used in living a life that is known for its istilah life skills.

Life skills are the skills possessed someone to boldly face the problems of life and the life of graceful without feeling depressed, then proactively and creatively seek and find a solution so that finally was able to overcome it (Supriatna, 2007). Based on the understanding of media literacy competency-oriented life skills at this high school teacher should be able to contribute to the improvement of the ability, willingness, and skills needed by a high school teacher to keep continuity of learning (live) and self development especially development concerning teaching-learning cycle in order to increase the skills of learners one on media literacy skills.

Supriatna (2007) outlines regarding the abilities, ability, and skill that is intended, namely (1) the ability is the realisation of the nature of cognitive life skills, (2) is capable of realization of life skills which are more affective, and (3) skill is the realisation of life skills which are psychomotor. Life skills include some basic capabilities, i.e., personal skills, social, academic, and Polytechnic (Marwiyah, 2012). The MoE life skills grouped into two, namely that life skills are generic (generic life skills) include personal skills (personal skills) and social skills (social skills). Life skills which are specific (specific life skills) includes academic skills (academic skill) and Polytechnic prowess (vocasional skills) (Supriatna, 2007).

As for life skills in the context of media literacy competence in these researchers include the following skills.

a. Personal Skills

Personal prowess in this study specifically is the ability to use and leverage the media to mengoptimalisasikan themselves, improve insight, knowledge, and abilities of

Figure 5 here's a per-scale percentage of rician frekuentatif activities producing the message media high school teacher of Bandung city.

Gambar 5 Persentase Frekuentatif Kegiatan Memproduksi Pesan Media

Based on the graph in Figure 5, the obtained data on the percentage of frekuentatif activities producing the message media of 43% of the respondents stated rarely and 33% were either never in doing these activities produce the message media as media literacy competency beorientasi description life skills. As for the details of activities that reflect the skills and competencies of the media literacy beorientasi life skills activities in producing media messages, among them (1) making media content (news, advertising, film, etc.) as a teaching materials and media, with the percentage of 70% frekuentatif (representation skills Polytechnic); (2) directing or assigning students to actively criticize media content either in the media or in social media, with the percentage of frekuentatif of 64% (Polytechnic prowess representation); (3) refer a writings from other sources into social media, with the percentage of frekuentatif amounted to 56% (representation of social skills); (4) make the content of the media (article and video) to share information and knowledge societies, with the percentage 54% of frekuentatif (the representation of social skills); (5) making media content as material for research, with the percentage of frekuentatif of 48% (representation of academic skills); (6) writing argument essays or to criticize an content or media messages in print, with the percentage of 46% frekuentatif (representation of personal skills); (7) post a question in the discussion forum online (online), with a percentage of frekuentatif of 46% (the representation of social skills); (8) making critical reviews about the dissatisfaction of a media content and put it on a personal blog, with a percentage of 40% frekuentatif (representation of personal skills); (9) following the discussion in the interactive television by telephone, with the percentage of frekuentatif of 38% (the representation of social skills); (10) sent a video to the news media that open service journalist audience e.g. sending video news to broadcast news journalist citizens (citizen journalism), with a percentage of 34% frekuentatif (representation of academic skills); and (11) make a video on the internet (Youtube) on the impact of media content, with a percentage of 33% frekuentatif (representation of academic prowess).

The results of the analysis and research on data describing the level of competence of media literacy-oriented life

skills Teacher SMA Bandung can be inferred that the Bandung city high school teacher is at intermediate literacy competencies with competency percentage of 70%. This means that a fairly high level of awareness against the impact of the media (76%) have not been followed by productive competence or in other words still exist in the user's tingkat or reactive media users have not been on proactive and productive conditions.

Type-type of media literacy-oriented life skills teacher
 Type of Media Literacy by type of Media
 Types of media based on aspects of the access levels frekuentatif
 Newspapers are still regarded as the most reliable information by HIGH SCHOOL teachers of Bandung in improving literacy competency. The use of newspapers and magazines is the interpretation that media literacy Teacher SMA Bandung still utilize literacy in terms of literacy. Table 1 below shows the frekuentatif types of print media that is often accessed by a high school teacher of Bandung city.

Table 1 Type of Print Media

No.	The Type Of Print Media	The Percentage
1	newspaper or newspaper	89%
2	Magazine	57%
3	Banners	29%
4	Posters	25%
5	Pamphle	18%
6	Other	11%

Source: research results (2016)

Table 1 shows the level of frekuentatif the use of the media the media literacy skills information in terms of narrow, i.e. media literacy competency only deals against there is not access to electronic media (audiovisual) broadcast television and radio (audio), as many as 82% of high school teacher of Bandung were still using media information broadcast television as a medium that contribute to media literacy competence whereas for level frekuentatif the use of the media any information broadcast radio (audio) only amounted to 43%.

Furthermore, table 2 below also shows the existence of a media literacy activity involving digital media. This means that the new media literacy has dominated the other informative media particularly the use and utilization of internet-based social networking media, whether it is site facebook, Twitter, Path, Instagram or application-based cell phone (smartphone) service providers and social networks such as Line or What'up. The dominance of digital media based social networking (96%) defeats the electronic media such as television (82%) and radio broadcasts (43%). That is, respondents or high school teacher of Bandung now shifts do media literacy activities at the new media literacy.

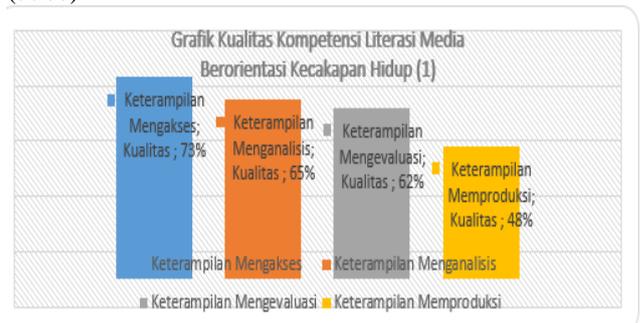

Tabel 1 Jenis Media Elektronik dan Digital

No.	Jenis Media Digital	Persentase
1	internet: jejaring sosial	96%
2	siaran televisi	82%
3	internet: surat-kabar <i>online</i> / <i>website</i> <i>newspaper</i> / <i>web-paper</i>	82%
4	internet: situs (<i>website</i>) resmi	50%
5	siaran radio	43%
6	<i>e-paper</i> : surat kabar atau majalah digital	32%
7	internet: situs (<i>website</i>) blog	32%
8	internet: situs (<i>website</i>) forum	32%
9	langganan berita daring (<i>online</i>)	14%

Location type

Media access activity to enhance the competence of the media literacy figures obtained persentase, amounting to 54% for the access to media literacy in school, 35% for access literacy media in societies, and 34% for the access to media literacy in the home. The school as a main container activity of educators and learners already provide support for media literacy competency activities menfasiltasi.

Media literacy competency-oriented quality of life skills
 Based on the results of the analysis of data obtained a description of the percentage literacy competency quality media oriented life skills teacher high school in Bandung city amounted to 61% of scale quality of life skills-oriented literacy competencies expected (100%). The amount of data for frekuentatif activities access, analyze, evaluate, and produce content or media messages is done by high school teacher of Bandung city of 2035. Thus, the percentage of quality media literacy competency-oriented life skills teacher HIGH SCHOOL in the city of Bandung as a whole amounted to 61% from the results of a comparison of the actual score (1580) with a score of ideal (3360).

Gambar 6 Kualitas Kompetensi Literasi Media Berorientasi Kecakapan Hidup (1)

Based on Figure 6, can be seen the percentage dominance of mapping skills through activities that represent the life skills beorientasi literacy competence that owned Bandung city high school teacher, as much as 73% domination activities literacy competency skills to access media on the message or content of the media, then 65% of the activities of the media literacy competency skills at analyzing

message content or media, 62% of the activities of the media literacy competence in the skills of evaluating the message or content of the media and only 48% of the activities of media literacy competence in skills produces a message or media content. That is, positive efforts are required in order for the high school teacher of Bandung was able to increase life skills beorientasi literacy competencies has to level productive.

Figure 7 shows the dominance of the Polytechnic in literacy competency skills of media oriented life skills for teachers of HIGH SCHOOL in the city of Bandung, amounting to 69%. That is to say, HIGH SCHOOL teachers in Bandung are already making use of the media and media content to improve the skills specifically related to the teaching-learning process or learning.

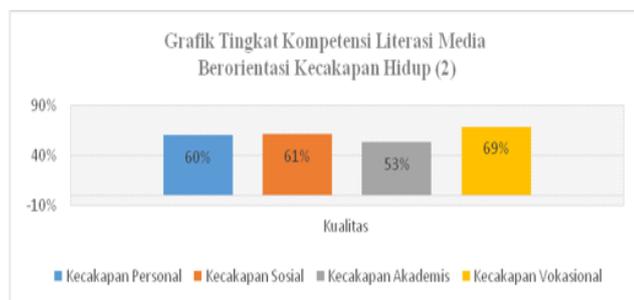

Figure 7 Berorientas Media Literacy Competency Quality life skills (2)

Factor endowments and restricting factors

A Supporting Factor.

Based on the analysis of data obtained a description of the factors supporting this as follows.

1. Sarana-prasarana in the media literacy competency.

One of them access to these kinds of media have already obtained easily either at school (work), in the environment (society), and the teachers have started to open up access to media messages at home personally. Access advice and this includes presence availability prasarana infrastructure both print media (newspaper subscriptions), electronic media (the existence of facilities such as television and radio elektornik), and digital media (internet) that can now be accessed at school, in the Community (public facilities), also in the House are even accessible for individual, personal, and private (Privacy).

2. Receptacle or teacher discussion forum regarding literacy competency.

The presence of colleagues or fellow to establishing who has the same focus in literacy competence in order to create a study group in kesalingan in the process of the transfer of science as well as ancillary skills literacy competency-oriented life skills for high school teacher of Bandung

3. Training that improves the literacy teacher competence.

Need for training-training for teachers in improving literacy competency. Peningkatan literacy competence should in theory to a practical level so the ability, willingness, and media literacy competence can be up to level productive. Such training should preferably be organized regularly and periodically either organized by

the Government, social agencies, colleges, and school/work place themselves with the aim of improving the competence of teachers professionally especially related to peningkatan kemelekan media and technology.

B. Factors Restricting

As for restricting factor of research data is (1) the limitations of the time teachers to perform the kegiatan self development especially improvement of media literacy competence so that high school teacher of Bandung city, so the high school teacher of Bandung city hasn't been able to memanfaatkan media optimally and productive; (2) the burden of teaching and other work load. The large number of weights class and the service work that is delegated to a particular teacher high school teacher in the city of Bandung made the existence of the time limitations in the development of the self; (3) Yet the existence of a container or forum that is the focus of literacy competency enhancement mastered specifically for high school teacher Bandung; (4) the lack of a container or forum on literacy competence enhancement; (6) lack of penyelenggaraan training, socialization, guidance or counseling regarding the competence of media literacy; and (7) the technical Constraints in the operation of various types of media in particular that based on ICT.

The availability of facilities and infrastructure supporting The internet access has been very accessible either in the school as a teacher's working environment, in society or in public facilities that can be accessed by the public, and now the internet is already a personal or private nature since it was already accessible on a cell phone belongs to. In addition to access to the media-based digital or new media, availability of pengelolaan internet filter that's been easy to come by so the protection or protection against sites not responsible can already was either constitutionally or by mail readers as a form of media literacy competence (a powerful mob) or social media facilities that can accommodate any complaints from the public to the providers of those services. Furthermore, access to the print media that is very adequate because print media particularly newspapers and magazines have become facilities obtained easily either at school, in institutions or companies of public service, many teachers who have already done the service personally against print media at his house each. Lastly, the availability of books supporting the literacy competence can be accessed in the public library or school library to the public.

III. CONCLUSION

Media literacy competency beorientasi life skills teacher SMA Bandung needs to be improved. Not only on the level of awareness of the impact of media on penggunaanya but it is up to the level of advanced media literacy competency. High school teacher of Bandung city already has a good awareness to the impacts generated by the media and has been conducting activities that can whet the media literacy competency. Although, dominance on activities that are in the competence of intermediate media literacy, i.e. activities to access and analyze media messages. Increased

activities on the level of information is still required. This can be seen from the level of frekuentatif on activities evaluate to produce media messages is still low. A high level of awareness against the impact of the media has not been followed by productive competence or in other words still exist in the user's tinggat or reactive media users have not been on proactive and productive conditions.

Judging from the media type, high school teacher of Bandung is already using the new media messages. It is seen from the domination of the internet-based informative media use, which is intended to facilitate the social networking, whether it is site or application in the shape of a mobile phone (smartphone). This is due to the existence of the facilities and infrastructure that are accessible, community school (public service), and home. Teacher educators as a subject (role models) must be capable of being the subject of media users and users of proactive, reactive, and productive. Media literacy competency improvement quite urgent and indispensable that teachers can utilize media optimally to help pengoptimalkan the process of education and learning as well as an increase in self development in a professional manner. A good media literacy competency can help in menghindari themselves of dependence as well as the use of media that tends towards the negative or on things that can harm yourself or others arising from the influence of the media.
